

Exploring a Sustainable Future

A 6-day Workshop at Auroville

September 04 – 10, 2011

'Exploring a Sustainable Future' introduces some of the Auroville technologies and explores an integral approach to sustainable practices. This includes exploring inner sustainability, without which humanity will not be able to achieve a permanent change of consciousness.

The workshop includes theoretical sessions, practical demonstrations and site visits. In the classroom sessions, we will cover topics such as environmental crisis, concepts of sustainability, water harvesting, wastewater treatment, solar energy, earth construction, food, community-building and wellness. We will take you on visits to see practical applications of sustainable principles. You will also get an opportunity to experience activities that explore the inner dimension.

Participants will stay at the Centre Guest House along with professionals from India and abroad and join in an intensive experience with sessions from 8.45 am to 9.00 pm every day. The sessions will be handled by an interdisciplinary group of Auroville residents, assisted by some external faculty.

The workshop includes boarding and lodging from **Sunday evening (4th September)** until **Saturday afternoon (10th September)**.
